

Steps for applying SAS Graphs

- 1) Search (menu, visual, SAS procedure) for SAS examples before trying to reinvent the wheel
- 2) Plan for simple solutions (options, SAS versions, procedures) instead of complex solutions Graphs
- 3) Minimize customization as much as possible, explore and use PROC SGPLOT for example
- 4) Don't be afraid to contact the SAS experts for help
- 5) Take advantage of SAS code/macros such as the forest plots
- 6) Use the power of mindmaps (organize, guide, resource)
- 7) Be aware of GOPTIONS and SAS versions
